SEMINAR

Određivanje 5 factor modela ličnosti

Neven Miculinić

Voditelj:

Zagreb, prosinac 2017.

OPIS PROBLEMA

Five-factor model je danas dominantni model psihologije licnosti. Optimal procurement in most industries involves forecasting of two quantities: prices of raw materials and customer's demand. The aim of this work is to integrate forecasts into production planning models, with the aim of minimizing overall procurement, holding and production costs under demand satisfaction constraints. The decision support system should allow the decision maker to integrate qualitative, unstructured information through a simple interface, for scenario selection and solution refinement
